Contents

	Preface	i
1	**Analysis of crystal and electronic structures**	1
1.1	Introduction	1
1.2	Extended Hückel method of electronic structure calculations	3
1.2.1	Strengths and weaknesses of the EHTB method	3
1.2.2	Parameters of the EHTB method	4
1.3	General features of *CAESAR*	5
	References	6
2	**Installation and running of the CAESAR package**	7
2.1	Installation	7
2.2	Licensing	12
2.3	Running the programs of *CAESAR*	13
2.3.1	Analysis of crystal structure	13
2.3.2	Analysis of molecular electronic structure	14
2.3.3	Analysis of crystal electronic structure	14
2.3.4	Analysis of Fermi surface	15
2.3.5	Analysis of electron density plots	15
2.4	Launching the programs from the *CAESAR* logo page	16
3	**Crystal structure analysis and editing**	17
3.1	Crystal structure analysis program *Builder*	17
3.2	Creating a crystal structure	18
3.3	Displaying and analyzing a crystal structure	19
3.4	Editing a crystal structure	21
3.5	Changing display options	25
3.6	Examples	26
3.6.1	Hexagonal graphite	26
3.6.2	κ-(BEDT-TTF)$_2$Cu(NCS)$_2$	30
3.6.3	K_xWO_3	37
3.6.4	$Tl_2Mn_2O_7$	43
4	**Electronic structures of molecules and solids**	49
4.1	Introduction	49
4.2	Electronic structures of molecules	50
4.2.1	Molecular orbital theory	50
4.2.2	Population analysis	52
4.2.3	Fragment molecular orbital analysis	52
4.2.4	Density of states	54
4.3	EHTB calculations	56

4.4	Electronic structures of solids	57
4.4.1	Bloch orbitals	57
4.4.2	First primitive zone	58
4.4.3	Crystal orbitals	59
4.5	Describing electronic structures of solids	61
4.5.1	Dispersion relations	61
4.5.2	Fermi level and k-point sets	62
4.5.3	Density of states	64
4.6	Partially filled bands	65
4.6.1	Normal metallic versus magnetic insulating states of a partially filled band	65
4.6.2	Normal metallic states and Fermi surfaces	68
4.6.3	Effective mass	69
4.7	States derived from a metallic state	70
4.7.1	Fermi surface nesting	70
4.7.2	Orbital mixing and new states	72
4.7.3	CDW instability	74
4.7.4	Superconducting state	76
	References	78
5	**Molecular orbital calculations and analysis**	80
5.1	MO calculation program *MC*	80
5.2	Creating an input file *filename.MI*	80
5.2.1	Basic parameter-setting for *filename.MI*	80
5.2.2	Advanced parameter-setting for *filename.MI*	83
5.2.3	Modifying *filename.MI*	88
5.3	Output file *filename.MO*	88
5.4	Limitations of *MC*	88
5.5	MO analysis program *MP*	89
5.6	Examples	97
5.6.1	Interaction between donor molecules in the $(BEDT\text{-}TSF)_2KHg(SCN)_4$ salt	97
5.6.2	Oxidation state of Au in $(Et_4N)_4Au_2Te_{12}$	104
5.6.3	Magnetic interactions between the V^{4+} ions in $[H_2N(CH_2)_4NH_2]V_4O_9$	108
	References	113
6	**Electronic band structure calculations**	114
6.1	Introduction	114
6.2	Creating an input file *filename.BI*	114
6.2.1	Basic parameter-setting for *filename.BI*	117
6.2.2	Advanced parameter-setting for *filename.BI*	117
6.2.3	Editing *filename.BI*	123
6.3	Output files of the *BC* program	123
6.4	Limitations of *BC*	124
6.5	Examples	125
	References	125
7	**Property calculations and analysis**	126
7.1	Introduction	126
7.2	Property calculation program *PC*	126
7.2.1	Input file *filename.PI*	126
7.2.2	Editing an input file	130
7.2.3	Limitations of *PC*	130
7.3	Property analysis program *PP*	130
7.3.1	Input file *filename.PG*	130

7.3.2	Display options of *PP*	130
7.3.3	Limitations of *PP*	139
7.4	Examples	139
7.4.1	Polyacetylene	139
7.4.2	Graphite	142
7.4.3	h-ZrRuP and o-ZrRuP	144
7.4.4	K_xWO_3	147
	References	148
8	**Fermi surface calculations and analysis**	150
8.1	Introduction	150
8.2	Fermi surface calculation program *FC*	151
8.2.1	Input file *filename.FI*	151
8.2.2	Editing an input file	153
8.2.3	Output files of *FC*	153
8.2.4	Limitations of *FC*	154
8.3	Fermi surface display program *FP*	154
8.3.1	Display and analysis options of *FP*	154
8.3.2	Limitations of *FP*	160
8.4	Examples	161
8.4.1	$(BEDT\text{-}TTF)_2KHg(SCN)_4$ and $(BEDT\text{-}TSF)_2KHg(SCN)_4$	161
8.4.2	κ-$(BEDT\text{-}TTF)_2Cu(NCS)_2$	163
8.4.3	K_xWO_3	166
	References	168
9	**Electron density plot calculations and display**	169
9.1	Introduction	169
9.2	Electron density calculation program *DC*	170
9.2.1	STM image simulation	170
9.2.2	AFM image simulation	172
9.2.3	Input file *filename.DI*	*172*
9.2.4	Editing an input file *filename.DI*	*175*
9.2.5	Output files of *DC*	175
9.2.6	Limitations of *DC*	175
9.3	Electron density display program *DP*	176
9.4	Examples	185
9.4.1	Graphite	185
9.4.2	β-Nb_3X_8 (X = Cl, Br, I)	187
9.4.3	(100) Surface of $SrTiO_3$	190
	References	194
